Students take courses in **Habitat Management** and **Conservation Skills** while exploring first-hand the country's diverse landscapes and habitats.

In addition to classroom instruction, students will be involved in practical experience in the field, exploring a range of habitats and wildlife both on the extensive college campus and through trips to other areas of Scotland.

Fully transferable, sealed university transcripts provided upon successful completion of the program. Earn up to **6 university credits** this summer!

Also included is an educational program of weekly visits to several of the main cultural and natural heritage sites of Scotland and the internationally recognized Royal Highland Show.

"Our day to day life during the four weeks was different every day. We would spend some mornings in the field or in the classroom. All of the field trips were very educational and a lot of fun. We learned about different types of habitats in Scotland and how to properly manage them. We met with different site managers and got to learn how they got their job, what they do and what they hope to see in the future for their site. This has been the best four weeks out of any summer I have ever had, I wish I didn't have to go home yet! This program taught me a lot of new conservation skills, and it was fun and exciting at the same time.

Amy, University of Arkansas, Scotland 2013

I learned how to do bird banding and site mapping for species. I gained a better understand of Scotland's culture and some of the struggles that its people face. I also learned about a career that I would be interested in pursuing for my future.

Moriah, Iowa State University, Scotland 2014
